

## Speed

I've got to break it down I'm making a connection  
I know that speed is the rate of change in position, and  
Velocity is both speed and direction.  
A preoccupation to deal with your rejection.

Why don't you hear me?  
Why aren't you near me?  
Why don't you want to stay?

Speed is distance divided by (time)  
Time is distance divided by (speed)  
Speed is distance divided by time.  
And distance, and distance, and distance is speed by time.  
Distance is speed by time.  
And it speeds by...

I've got to break it down I'm making a connection  
Velocity is both speed and direction.  
A change in velocity is acceleration,  
Which can occur by changing speed or direction.

No, don't you leave me.  
No - don't you need me?  
No, don't you walk away!

Speed is distance divided by (time)  
Time is distance divided by (speed)  
Speed is distance divided by (time)  
Time is distance divided by (speed)  
Speed is distance divided by time.  
And distance, and distance, and distance is speed by time.  
Distance is speed by time.  
And it speeds by...

I've got to break it down I'm making a connection.  
Force is a push or pull to try to start a motion.  
Opposing motion between surfaces is friction.  
I've got to break it down, break it down, break it down!

Speed is distance divided by (time)  
Time is distance divided by (speed)  
Speed is distance divided by (time)  
Time is distance divided by (speed)  
Speed is distance divided by time.  
And distance, and distance, and distance is speed by time.  
Distance is speed by time.
